Before you raise the ad budget

4 months

until a customer pays you back

Mohammed Nagieeb · @nagieeb

CAC, simply

Everything you spent to win customers in a month ÷ new customers.
Ads, tools and sales salaries. Not just ads.

Mohammed Nagieeb · @nagieeb

And payback

CAC ÷ what the customer nets you each month.

The result is the number of months until your money comes back.

Mohammed Nagieeb · @nagieeb

An example on paper

You win a customer for EGP 1,200.

They pay 400 a month at a 75% margin = 300 net.

1,200 ÷ 300 = 4 months.

A real number

14 → 4

EGP per new user at Plstka

About 14 at scale in 2025, about 4 in the latest campaign. Blended with organic.
And that's CAC alone. Without revenue per user, it's half the math.

Mohammed Nagieeb · @nagieeb

The trap: customers leave before they pay back

They churn in month 3 and you need 4?

Every new customer loses you money, even while sales grow.

Startups die from cash, not from paper.

Mohammed Nagieeb · @nagieeb

Save this

Work out payback in 5 steps

1. Add up all acquisition spend for a month
2. Divide by new customers = CAC
3. Monthly net = subscription × margin
4. CAC ÷ net = payback months
5. Compare it to average customer lifetime

Mohammed Nagieeb · @nagieeb

I'm Mohammed. I build products, and the machine that sells them, from Riyadh.

Save this and run the numbers today.

Then drop your payback number in the comments.
