Not a developer, not a salesperson

14,533 potential customers

in one dataset. That's GTM Engineer work

Mohammed Nagieeb · @nagieeb

The idea, simply

Instead of a sales team searching and messaging by hand,
one person builds a system that does that work and keeps improving it every week.

Mohammed Nagieeb · @nagieeb

What does it actually do?

Pulls data on companies.

Catches signals: who is hiring, who just opened.

Drafts messages with AI and measures the replies.

Mohammed Nagieeb · @nagieeb

The list before the message

The 14,533 potential customers weren't messages.
They were a list:
who, where, and how to reach them.
Without a list, the best message goes to the wrong person.

Mohammed Nagieeb · @nagieeb

Why now?

Data APIs, AI that writes, and tools that connect everything.

What used to need a team is now a system one person runs.

Mohammed Nagieeb · @nagieeb

The rare skill is the mix

Enough code to build it.

Enough selling to know what's worth building.

Mohammed Nagieeb · @nagieeb

Save this

The sales machine in 5 steps

1. Write your ideal customer in one line
2. Build the list from public data
3. Pick one signal to start with
4. A short message, personalized by AI
5. Measure replies weekly and change one thing

Mohammed Nagieeb · @nagieeb

I'm Mohammed. I build products, and the machine that sells them, from Riyadh.

Save this for when you build your own machine.

And tell me: are you closer to the code or the selling?

Mohammed Nagieeb · @nagieeb
