From my work at Plstka

EGP 345K in Meta ads I ran. I stopped trusting install cost

From 15K installs to 100K+.

But the number I care about is a different one.

Mohammed Nagieeb · @nagieeb

EGP 2.35

per install in the latest campaign. Great for a screenshot

But an install isn't a customer.

Someone who installs and never registers = zero.

Mohammed Nagieeb · @nagieeb

~EGP 4

per registered user in the same campaign

Pulled from the database, not from Meta, and blended with organic.
Don't mix it up with install cost.

Mohammed Nagieeb · @nagieeb

~EGP 14

The same number when the budget grew

In Q3 2025 we spent EGP 211K, and a registered user cost about 14.
The EGP 4 was 4 days on a small budget.

Mohammed Nagieeb · @nagieeb

One good campaign isn't a trend

In early 2026 we were back near 14.
So I won't tell you "costs are falling". I'll say "latest campaign".

Mohammed Nagieeb · @nagieeb

Behind the latest campaign: a video that won on its own first

We didn't invent an ad. We funded a UGC video people picked organically.
And 31% of installs registered.

Mohammed Nagieeb · @nagieeb

Save this

4 numbers instead of install cost

1. Cost per registered user, from the database
2. Registration rate from installs
3. The number at full budget, not your best day
4. Never mix installs and users in one sentence

Mohammed Nagieeb · @nagieeb

I'm Mohammed. I build products, and the machine that sells them, from Riyadh.

Real numbers, the good and the bad.
Save this, and tell me in the comments: which number do you track?

Mohammed Nagieeb · @nagieeb
